

Document Intelligence for the Skeptical Age

Reading critically at scale.

SYSTEM: VERIDOC // STATUS: ACTIVE // INGESTION: READY

We are drowning in words and starving for signal.

85% of people cannot reliably detect AI-generated text.

of people cannot reliably detect AI-generated text. As LLMs scale, the gap between human and machine writing vanishes.

60% of viral articles contain at least one logical fallacy.

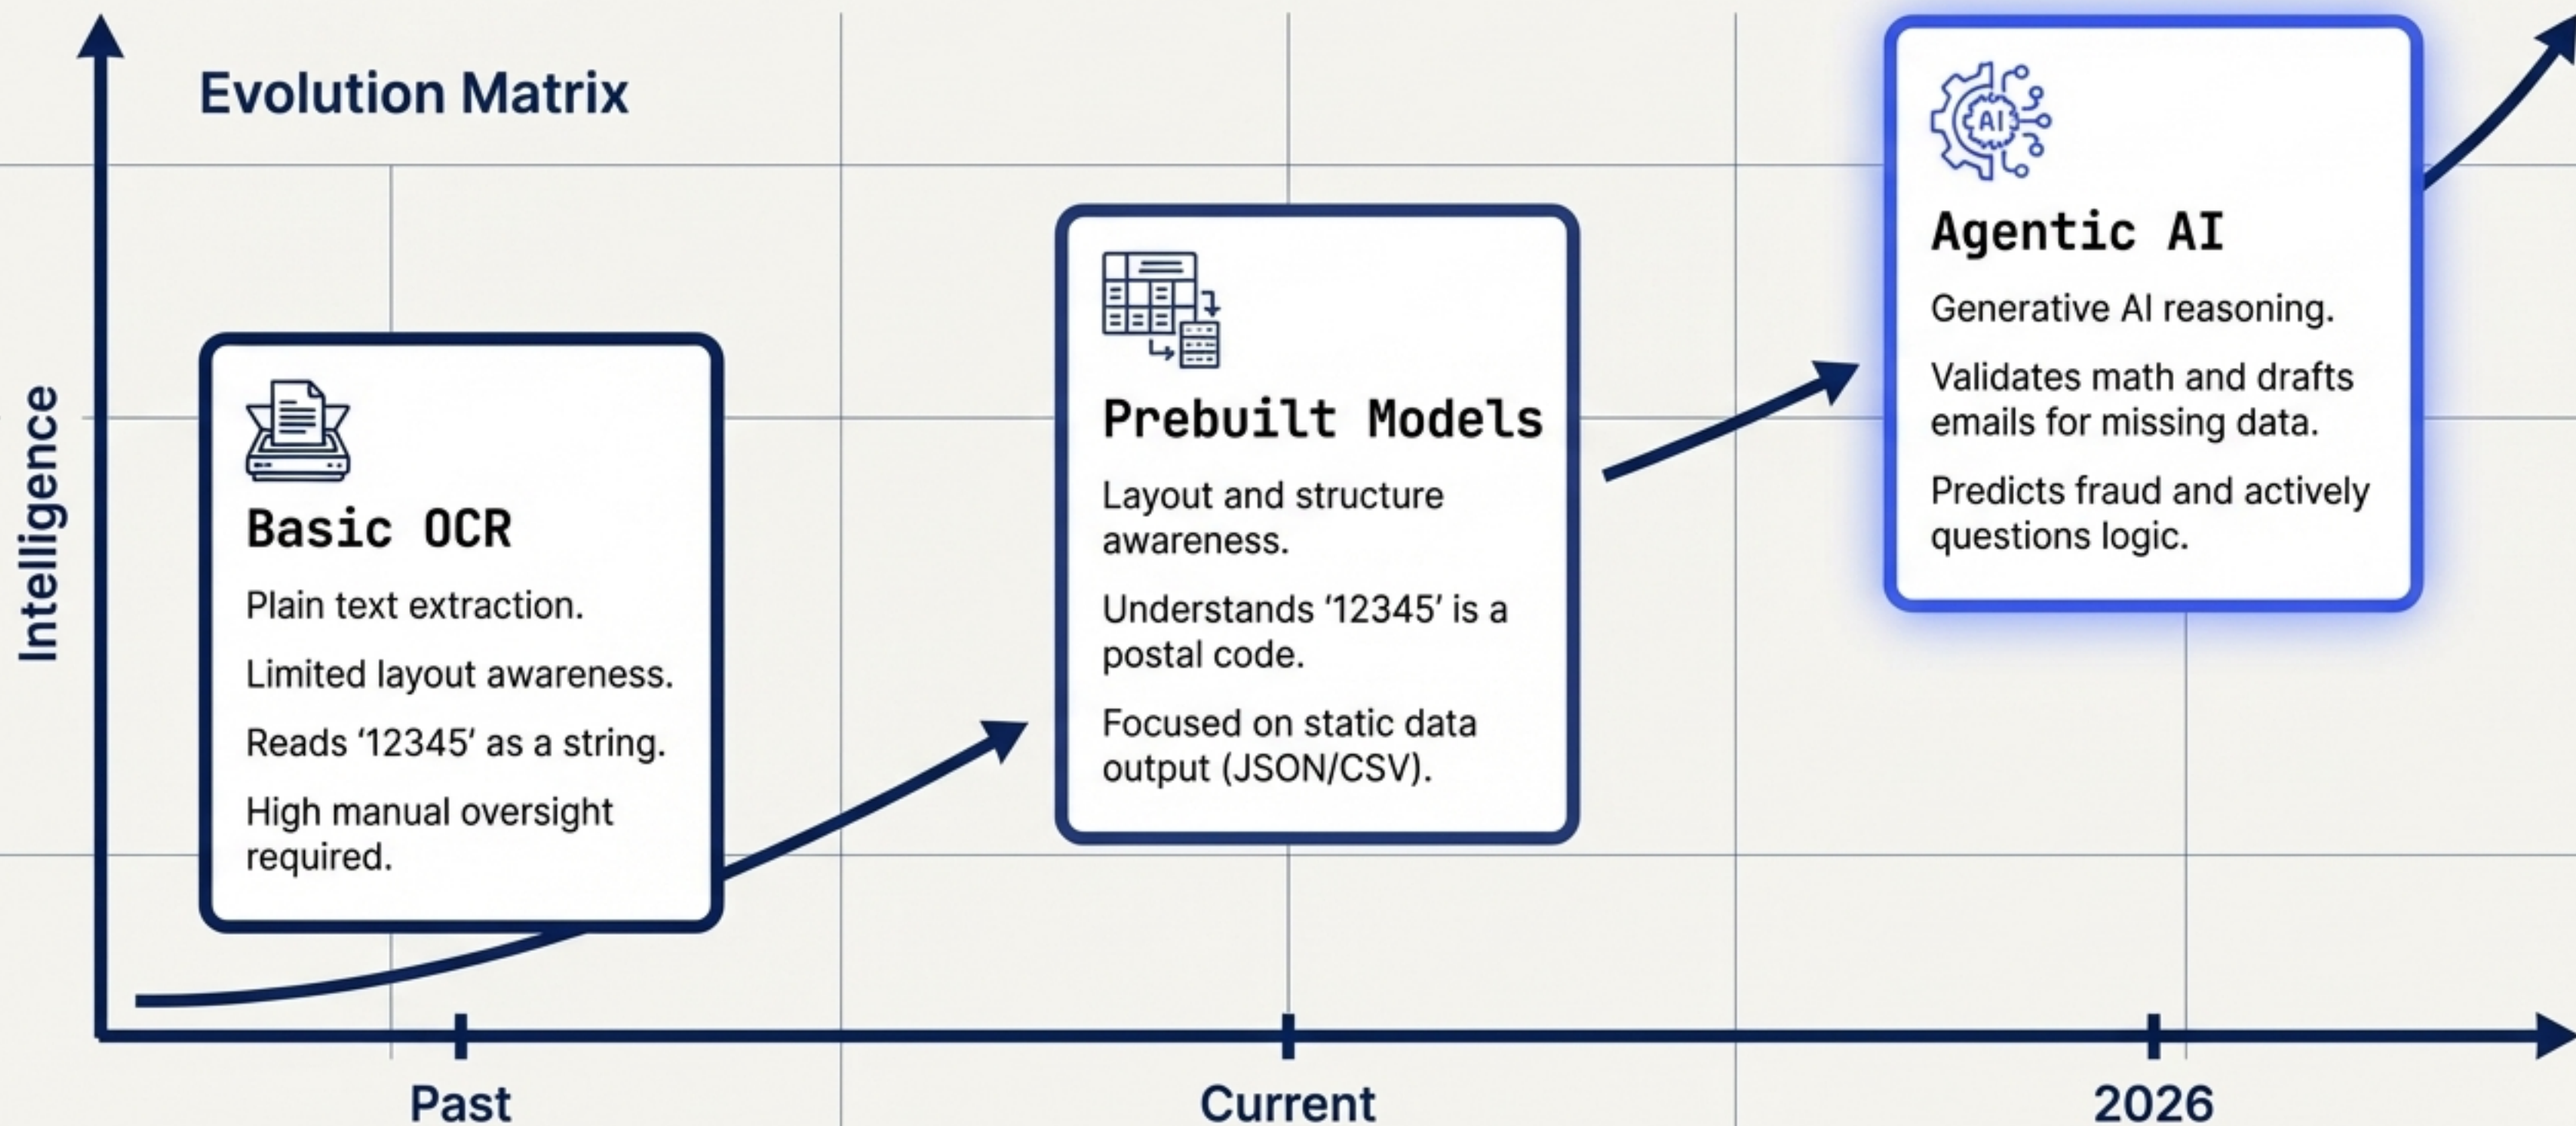

of viral articles contain at least one logical fallacy. Emotional reasoning and straw man arguments act as the invisible machinery of persuasion.

\$78B is lost annually to decisions made on bad information.

is lost annually to decisions made on bad information. From investments to policy debates, the cost of trusting the wrong source is enormous.

The \$31B Document Intelligence market has shifted from reading to reasoning.

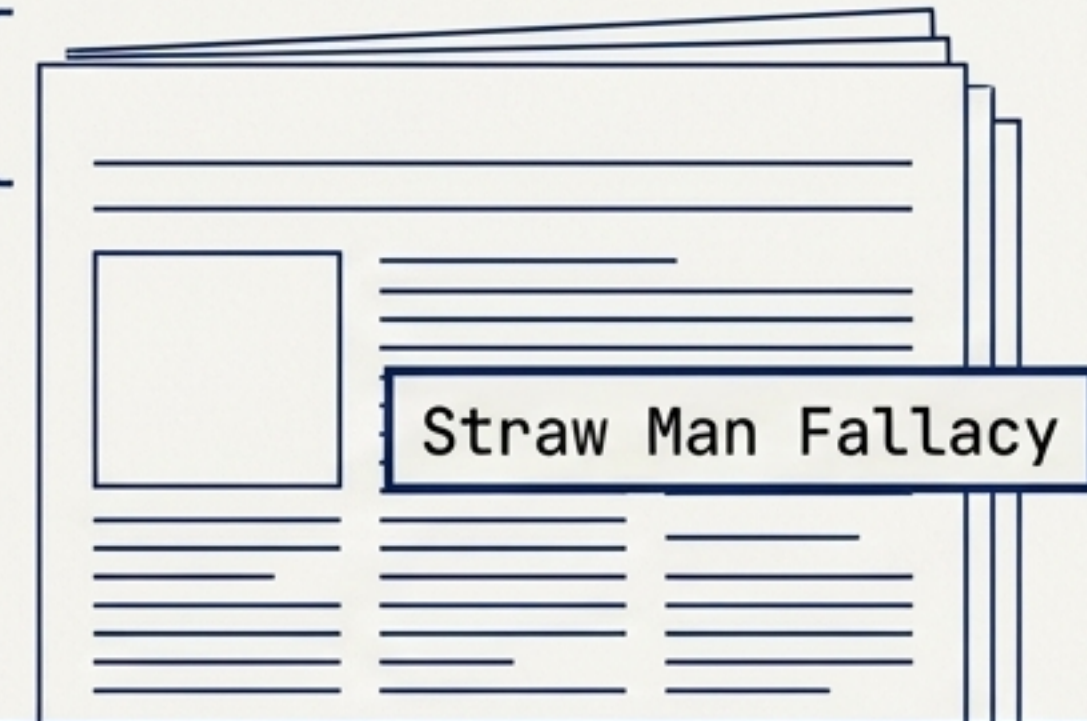

The same multi-billion dollar technology used to audit invoices can now audit reality.

Financial Auditing

Reality Auditing

Agentic AI

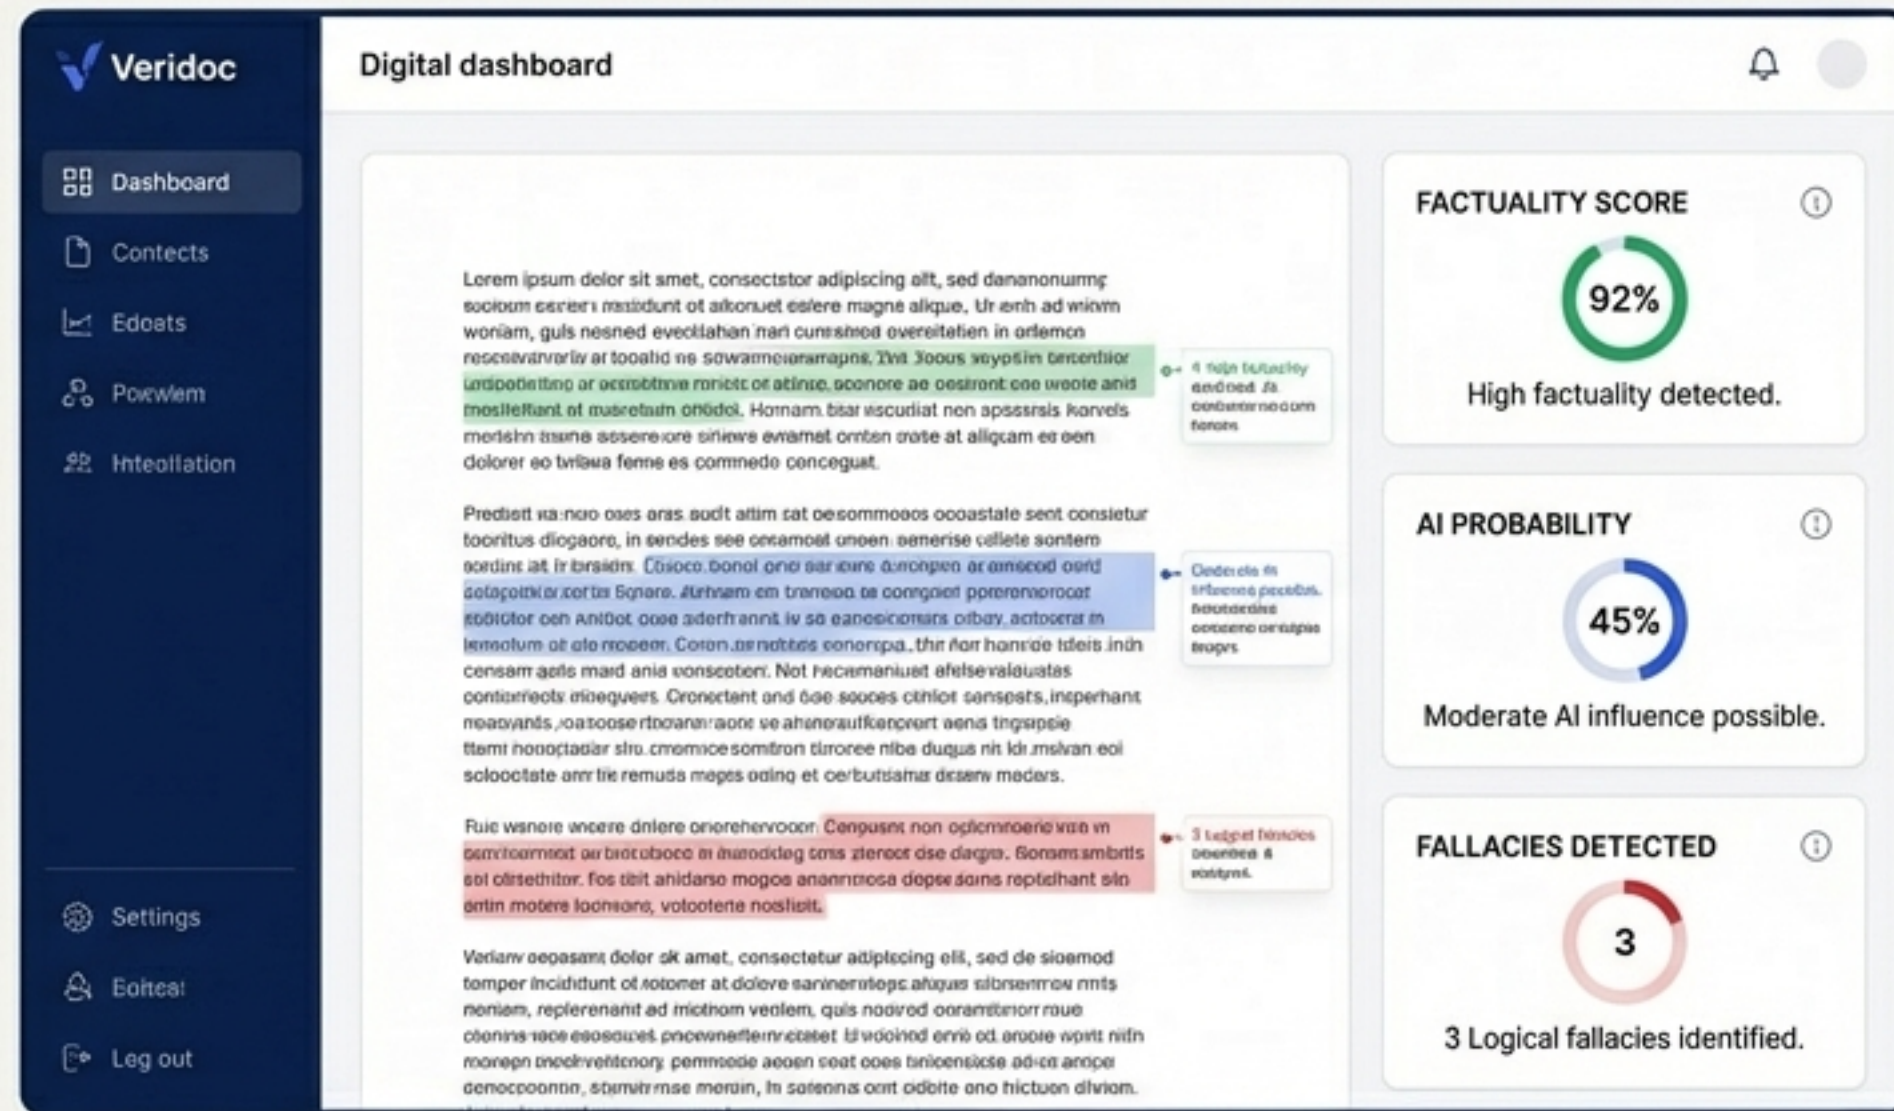

Banks use AWS Textract and Bedrock to verify if an invoice total matches its line items. It operates as a disciplined auditor enforcing rules.

Veridoc utilizes the exact same foundational architecture and few-shot learning to verify logic, detect fallacies, and measure factual consistency in human thought.

Synthesis: Veridoc is the ultimate due diligence engine, repurposing enterprise-grade compliance infrastructure for everyday information.

Veridoc applies the skeptical lens of a great editor to a thousand documents at once.

Veridoc analyzes any document or article from a URL or a file and reveals exactly what you are dealing with. It evaluates content to uncover hidden persuasion, misinformation, and factual inconsistencies instantly.

[No credit card required] [Runs locally or in the cloud] [Your documents stay yours]

Four steps from raw document to deep understanding.

Step 1: Submit

Upload a PDF, Word doc, HTML, plain text, or paste a URL. The system fetches and cleans the content automatically.

Step 2: Investigate

Provenance matters. We verify publication date, author, domain history, and canonical URLs before analysis begins.

Step 3: Analyze

A battery of AI models score the document across multiple dimensions simultaneously. Scores stream in real time.

Step 4: Collect

Save to collections, compare side-by-side, and utilize trend dashboards to monitor quality shifts across sources and time.

Eight unique lenses form one complete intelligence profile.

INTELLIGENCE RADAR

LOGICAL FALLACY

FACTUALITY

INTEGRITY

AI
GENERATION

PSEUDOSCIENCE

EMOTIONAL
TONE

SOURCE
PROVENANCE

FICTIONAL
CONTENT

Logical Fallacy Rating

Detects specific types (ad hominem, false dichotomy) and highlights the triggering passages.

Factuality Confidence

A 0 to 1 score based on internal consistency, citation signals, and cross-referenced claims.

AI Generation Probability

Dedicated detection models assess whether text is human or machine-generated.

Pseudoscience Indicators

Flags unfalsifiable claims, anecdotal evidence, and absence of peer review.

Fictional Content Likelihood

Distinguishes reported fact from narrative, satire, or speculation.

Source Provenance

Surfaces domain reputation, WHOIS history, and archive presence.

Every score is explainable, actionable, and tied directly to the text.

JetBrains Mono
[ALERT] Straw Man Fallacy Detected:
Misrepresents the opposing position.

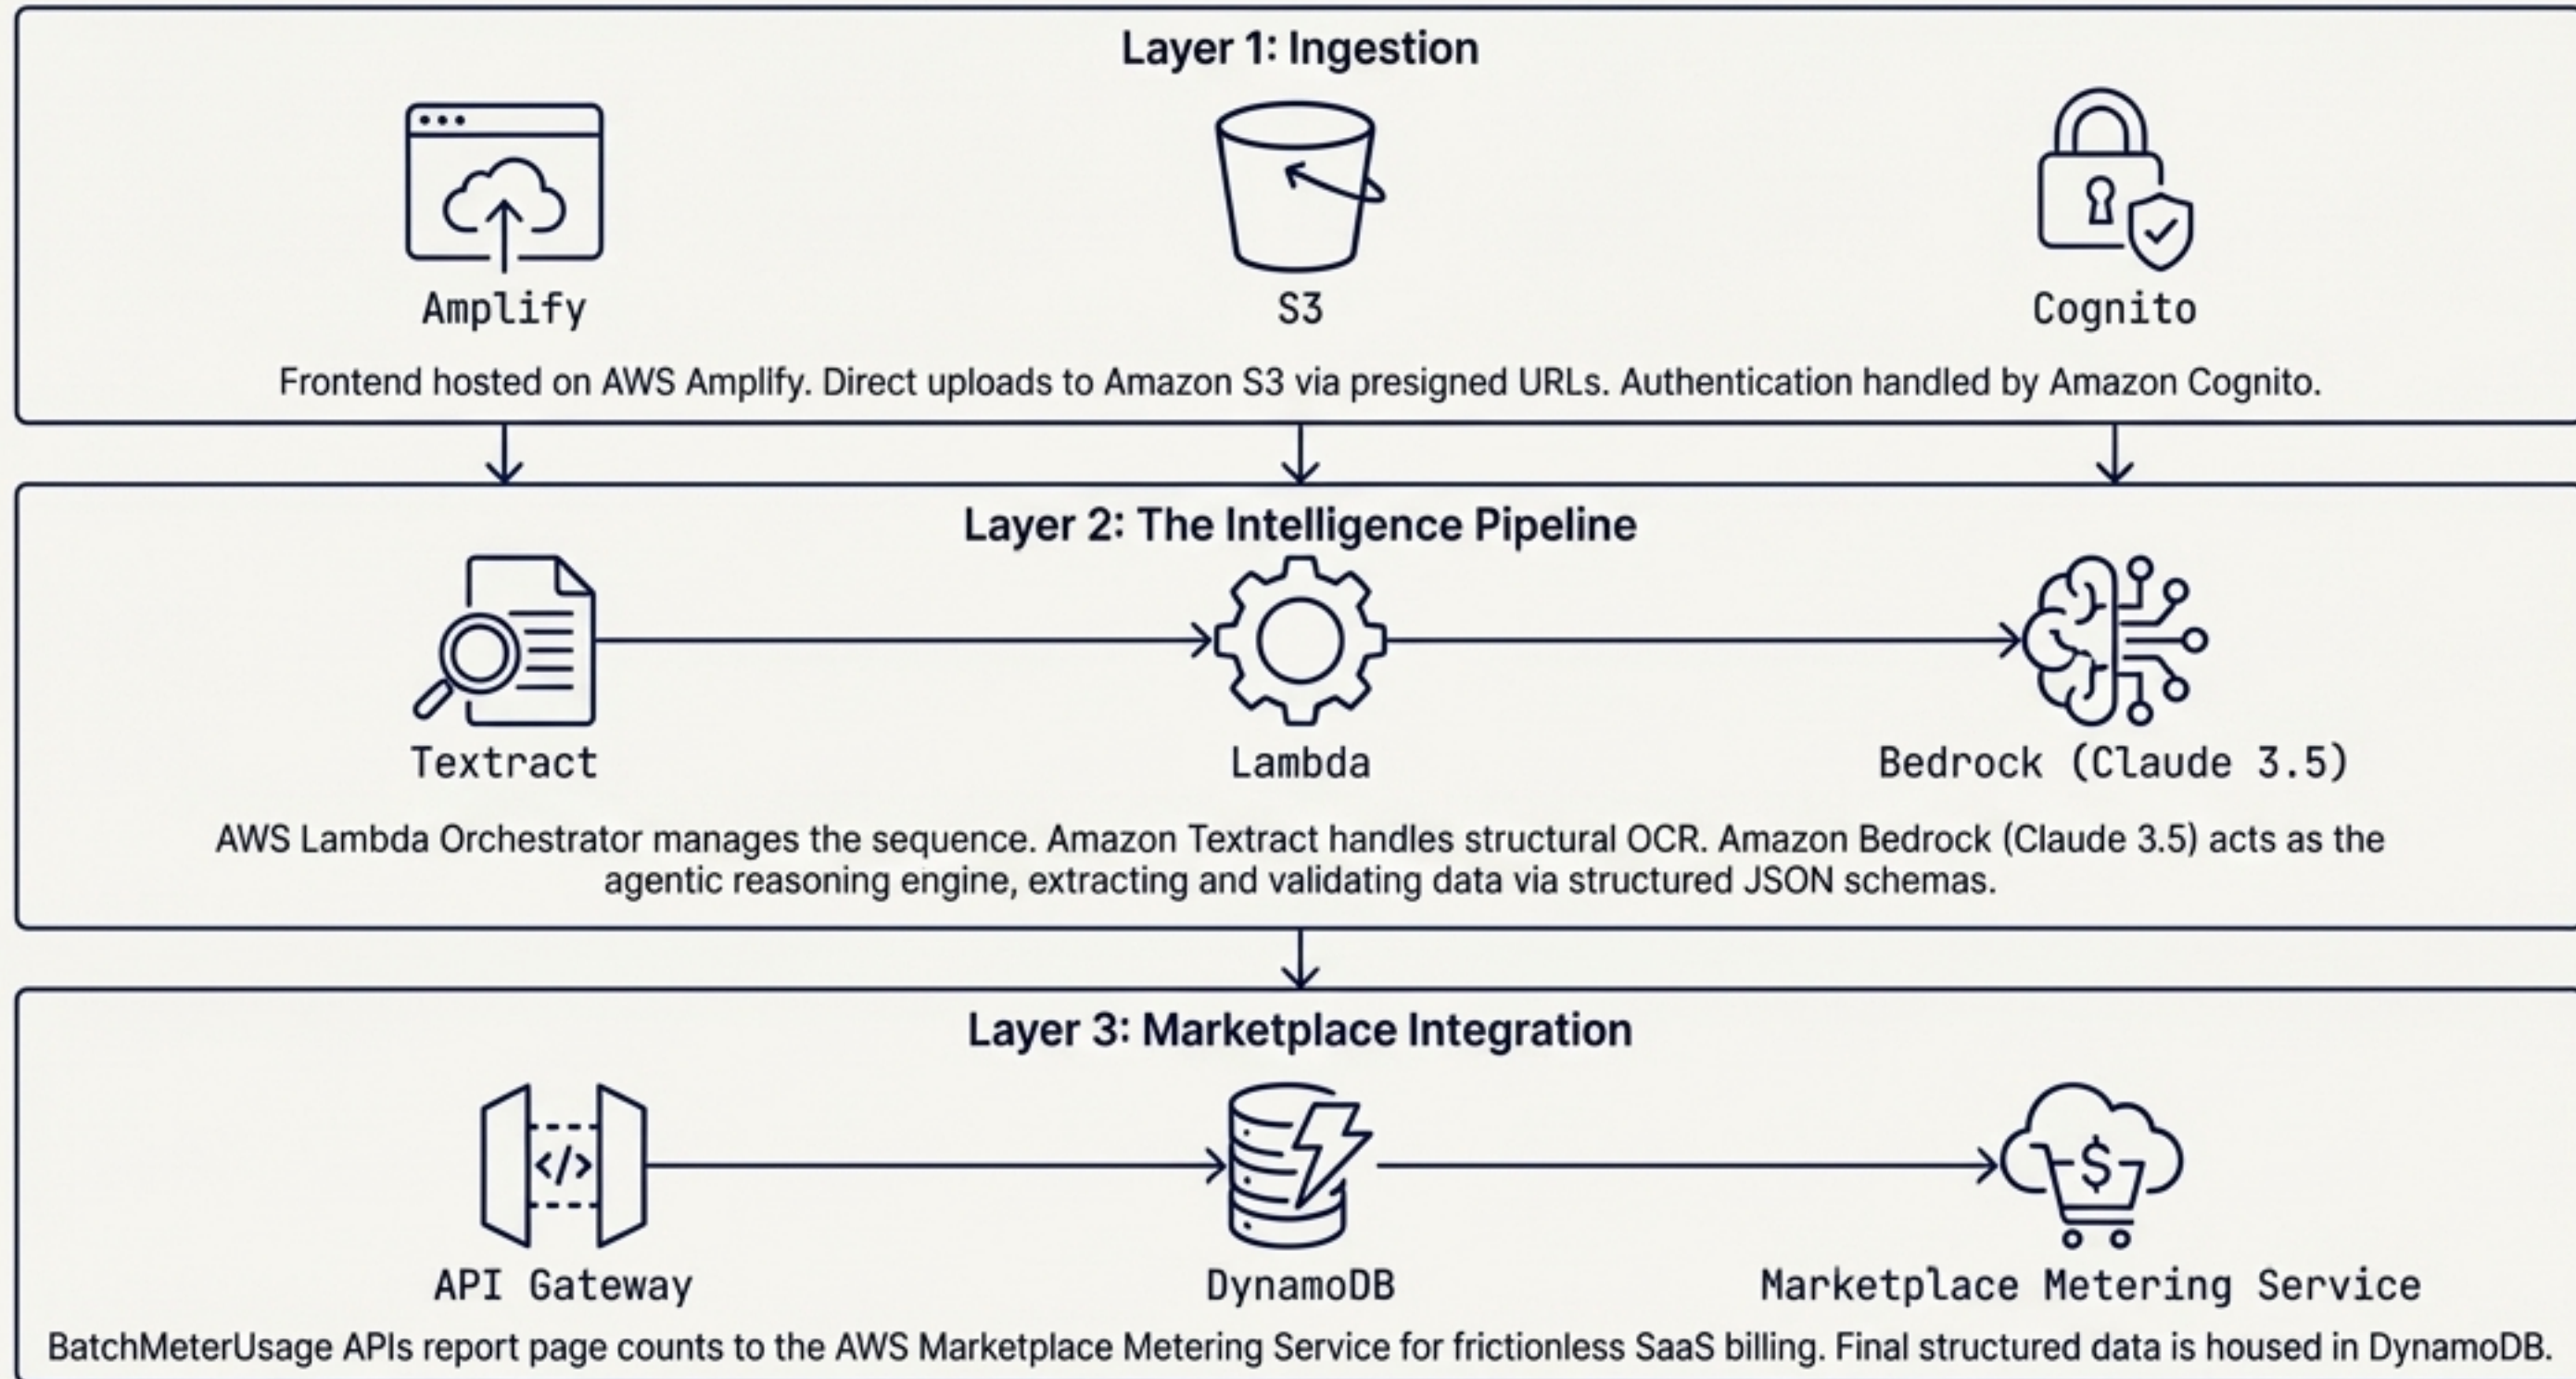

JetBrains Mono
[ALERT] False Dichotomy: Presents only
two extreme options.

The **radical** new policy will destroy the
economy. Either we stop it now, or we lose our
country forever. **Studies show** it's a disaster.

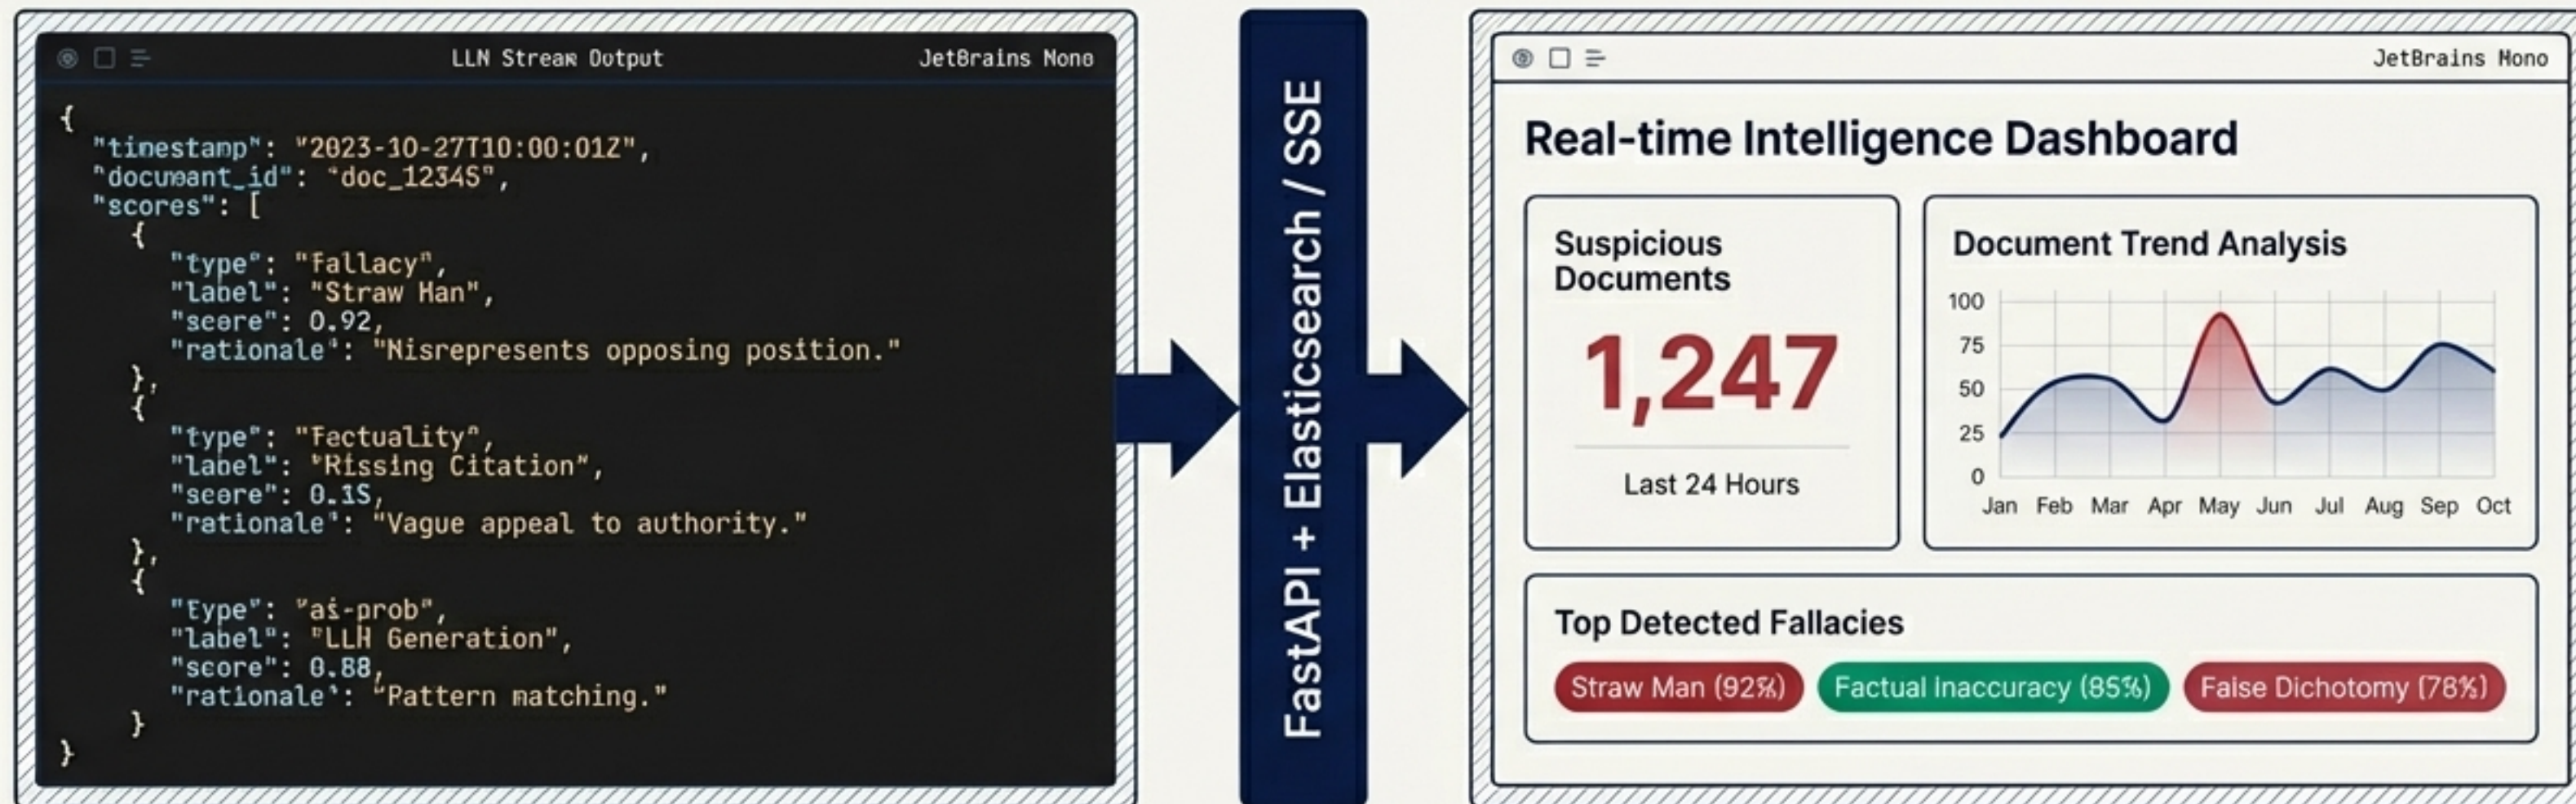

JetBrains Mono
[AI-PROB] 92% Likelihood of LLM
Generation.

JetBrains Mono
[FACTUALITY] **Missing Citation:** Vague
appeal to authority without specific
references.

A serverless architecture designed for zero idle cost and enterprise trust.

Elasticsearch rollups instantly turn complex AI outputs into interactive trend dashboards.

The Engine

A FastAPI endpoint with Redis pub/sub streams scores in real-time via Server-Sent Events.

The Analytics

Every score is a float with a paired keyword rationale in Elasticsearch.

The Output

Driven entirely by a single rollup query. ES computes trend lines and counts pseudoscience pills on the fly in milliseconds.

The Intelligence Paradigm Shift.

Capability	Traditional OCR	Standard AI Detectors	Veridoc Agentic Intelligence
Primary Output	Plain Text String	Single % Score	Multi-Dimensional JSON Metadata
Contextual Understanding	None	Style Heuristics	Deep Logical & Factual Reasoning
Transparency	N/A	Black Box	Line-by-Line Rationale & Citations
Actionability	Requires Manual Entry	Pass/Fail Only	Trend Analysis & Semantic Search

Built for anyone who needs to know what they are reading.

Researchers & Academics

Build evidence bases you can trust. Instantly see which literature leans on fallacies or lacks factual consistency.

Journalists & Fact-Checkers

Vet sources before publishing. Surface provenance gaps and flag AI-generated content passed off as human reporting.

Investors & Analysts

Pressure-test the narrative. Score earnings calls and market research to discover which sources consistently overstate or rely on appeal-to-authority.

Legal & Compliance Teams

Perform due diligence on third-party reports, expert witness materials, and regulatory filings before making decisions.

Educators & Students

Teach critical thinking at scale using Veridoc's breakdowns as a tool for media literacy and epistemics.

Curious Individuals

Never be manipulated without knowing it. Analyze viral articles and social media threads to separate signal from noise.

Frictionless adoption through outcome-based pricing and native AWS integration

Tier 1: Reader (Free)	Tier 2: Analyst (\$29/mo)	Tier 3: Team (\$99/mo)
Best for curious individuals.	Best for researchers and journalists.	Best for legal, finance, and enterprise.
50 documents/month, all 8 analysis dimensions, 7-day history.	1,000 documents/month, unlimited collections, trend dashboards, semantic search, and CSV/JSON export.	10,000 documents/month (10 seats), shared collections, API access, and Docker self-hosting option.

The AWS Advantage: Built as a SaaS-on-Marketplace model

Enterprise users bypass complex procurement by subscribing directly via their existing AWS bill using Cloud Credits.

The definitive due diligence engine for human thought.

The ability to read critically at scale to apply the same skeptical lens to a thousand documents that a great editor applies to one is the most important intellectual tool of our era.

Veridoc. Know what you are reading.
